

HEXDATA K2 IMPORT/EXPORT PLUGIN DOCUMENTATION

Overview :- It's an extension to [HexData component](#). You need HexData to make it work. You can use it to add data to your Joomla K2 Items from a CSV file. You can also export your Joomla K2 items data into a CSV file using this extension. It's built specifically for K2 component, hence provides you a much simpler way to manage your data. It can also be used to migrate your Data from other components to K2 component. You can find HexData [here](#).

FEATURES & BENEFITS:-

- You can create different profiles for import & export.
- Different customization options for import & export.
- Allows you to set order in which you want to export your k2 Items
- Allows you to only add / update data into the desired columns, you can simply choose to skip remaining columns.
- Allows you to add / update categories as well.
- Allows you to export k2 items from all or a particular category.
- Allows you to set a default column value for all the records to be imported
- Automatically matches your CSV columns with your Database table columns
- Import any CSV file, regardless of size or number of columns.

Technical Specifications :-

The minimum requirements to run HexData K2 Plugin are:

- Joomla! 2.5.x or 3.x
- PHP 5.x +
- MySQL 5.0.4 +

We recommend:

- Joomla! 2.5.x or 3.x
- PHP 5.x +
- MySQL 5.0.4 +
