

HEXDATA MODULE IMPORT/EXPORT PLUGIN DOCUMENTATION

Overview :- It's an extension to [HexData component](#). You need HexData to make it work. You can use it to add / update data to Joomla modules from a CSV file. You can also export your module data into a CSV file using this extension. It's built specifically for Joomla module, hence provides you a much simpler way to manage your data. It can also be used to migrate your module data from one site to another site. You can find HexData [here](#).

FEATURES & BENEFITS:-

- You can create different profiles for import & export.
- Different customization options for import & export.
- Allows you to set order in which you want to export your module data
- Allows you to only add / update data into the desired columns, you can simply choose to skip remaining columns.
- Allows you to insert / update modules.
- Allows you to export all modules or with a particular publish status.
- It also allows you to import Menu Assignments.
- Automatically matches your CSV columns with your Database table columns.
- Import any CSV file, regardless of size or number of columns.
- It only works for Front end modules.

Technical Specifications :-

The minimum requirements to run HexData Module Plugin are:

- Joomla! 2.5.x or 3.x
- PHP 5.x
- MySQL 5.0.4

We recommend:

- Joomla! 2.5.x or 3.x
- PHP 5.x
- MySQL 5.0.4
